

SuperVisor® and WingMan™ now available with TriCore™ Technology

Code 3, Inc. announces their popular SuperVisor and WingMan products are now available with TriCore Technology.

Patented TriCore Technology, exclusive to Code 3, delivers more light output per watt than any other current halogen, strobe or LED lighthouse. It is more than two times brighter than any other warning light available today.

SuperVisor is a low-profile interior light, contoured to fit against the upper interior of a windshield between the sun visors and glass. At only 2" tall, the SuperVisor blends in with the interior of the car and remains unseen until energized. A special housing prevents the lights from reflecting back into the driver's eyes.

The WingMan is designed to fit in the rear window of patrol vehicles and is the perfect complement to the SuperVisor. Like the SuperVisor, it is just 2" tall, virtually undetectable from the outside and will not block the driver's view of traffic.

Both SuperVisor and WingMan come in vehicle specific designs to provide a custom fit. Lighthouses in the product can be independently wired in a variety of flash patterns. All TriCore modules are covered by a 5 year warranty and are available in red, blue, amber or white.
