

## **XT4 and XT6 LEDs Now Available in Shrouded Versions**

The XT4 and XT6 LED auxiliary lights are now available in shrouded versions. Retractable side guards provide added protection from light reflecting into the driver's eyes. The visor or shroud allows the unit to fit more snugly against the windshield, using Z-brackets with attached suction cups.

The XT4 and XT6 have black bezels and a clear lens with amber, blue, green, red or white LEDs. They are available in one and two color combinations. Single head modules are available in dual colors. Twenty-two flash patterns are programmed into the lighthead, which operates at 12/24 Volts.

The LEDs are covered by a five year warranty.
